Critical Thinking Assignment 1: Create MySQL Database

This documentation is part of the Critical Thinking 1 Assignment from ITS410: Database Management at Colorado State University Global. The documentation provides screenshots showcasing the creation of the My Guitar Shop database using a script and additional scripts illustrating basic data querying.

The Assignment Direction:

Create MySQL Database

You will use MySQL Workbench to create the My Guitar Shop database to review the tables in this database and to enter SQL statements and run them against this database.

Make sure the MySQL server is running

1. Start MySQL Workbench and open a connection for the root user.
2. Check whether the MySQL server is running. If it isn't, start it.

Use MySQL Workbench to create the My Guitar Shop database.

3. Download and open the script file named **my_guitar_shop.sql** by clicking the Open SQL Script File button in the SQL Editor toolbar. Then, use the resulting dialog box to locate and open the file.
4. Execute the entire script by clicking the Execute SQL Script button in the SQL editor toolbar or by pressing Ctrl+Shift+Enter. When you do, the Output window displays messages that indicate whether the script executed successfully. Take a screenshot.

Use MySQL Workbench to enter and run SQL statements

5. Double-click on the my_guitar_shop database to set it as the default database. When you do that, MySQL Workbench should display the database in bold.
6. Open a SQL editor tab. Then, enter and run this SQL statement:

SELECT product_name FROM products

Take a resulting screenshot.

7. Delete the *e* at the end of product_name and run the statement again. Note the error number and the description of the error. Take a resulting screenshot.
8. Open another SQL editor tab. Then, enter and run this statement:

SELECT COUNT(*) AS number_of_products

FROM products

Use MySQL Workbench to open and run scripts

9. Download and open the script named **product_details.sql**. Note that this script contains just one SQL statement. Then, run the statement. Take a resulting screenshot.
10. Download and open the script named **product_summary.sql**. Note that this opens another SQL editor tab. Then, run the statement. Take a resulting screenshot.
11. Download and open the script named **product_statements.sql**. Notice that this script contains two SQL statements that end with semicolons. Then, run the statement. Take a resulting screenshot.

All the screenshots should show current date. Example of screenshot.

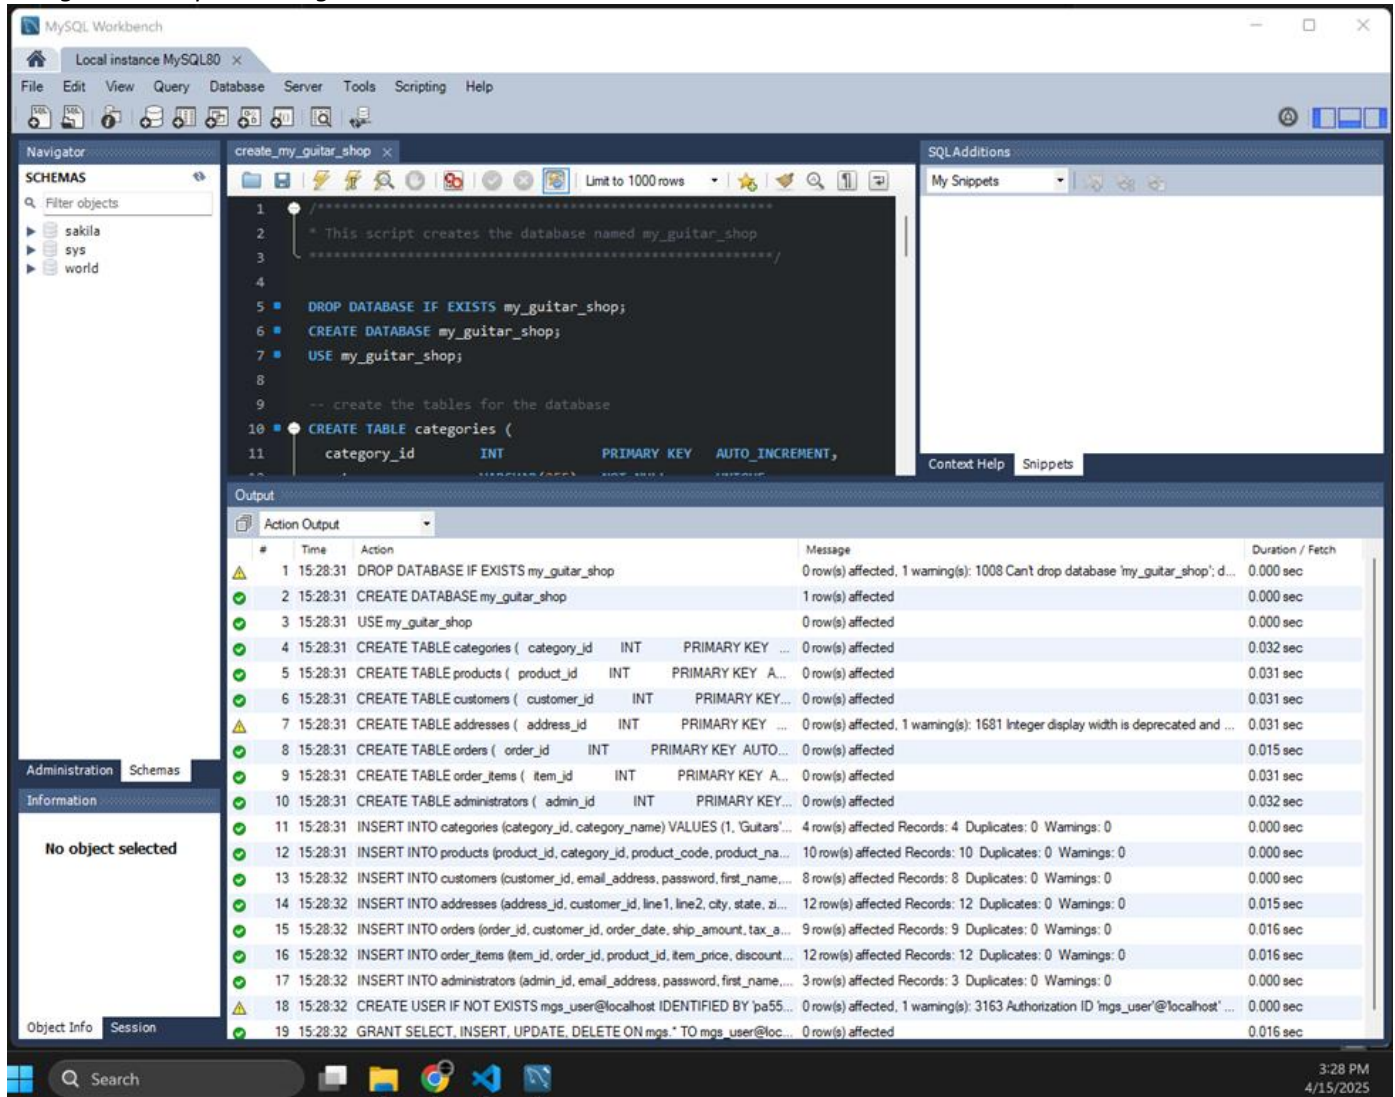

Submit your labeled results screenshots in a Word file.

Assignment Step 7: Product Names Error (Screenshot Not Required by Assignment)

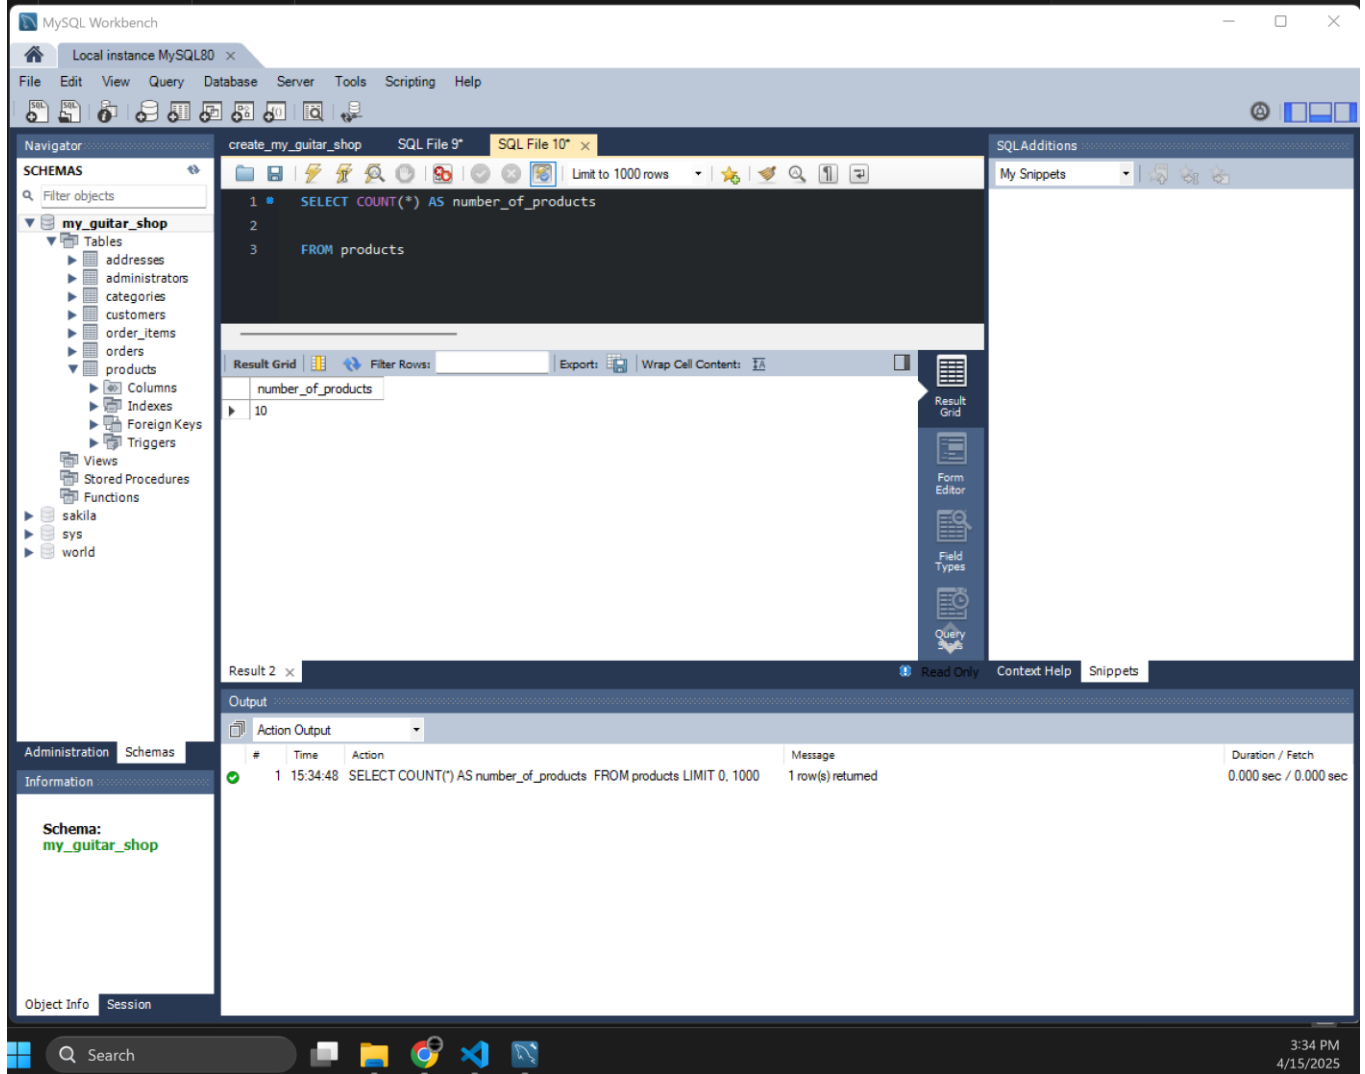

Note: The figure illustrates the MySQL Workbench result after performing steps 7: Product Names Error (Screenshot Not Required by assignment).

Please see the next page.

Figure 4

Assignment Step 8: Number of Products (Screenshot Not Required by Assignment)

Note: The figure illustrates the MySQL Workbench result after performing step 8: Number of Products (Screenshot Not Required by assignment).

Please see the next page.

Figure 5*Assignment Step 9: Product details*

The screenshot shows the MySQL Workbench interface. The left sidebar displays the 'my_guitar_shop' schema with various tables and views. The main editor window shows a SQL query:

```
1 SELECT product_name, list_price, date_added
2 FROM products
3 ORDER BY product_name
```

The 'Result Grid' displays the following data:

product_name	list_price	date_added
Fender Precision	799.99	2018-06-01 11:29:35
Fender Stratocaster	699.00	2017-10-30 09:32:40
Gibson Les Paul	1199.00	2017-12-05 16:33:13
Gibson SG	2517.00	2018-02-04 11:04:31
Hofner Icon	499.99	2018-07-30 14:18:33
Ludwig 5-piece Drum Set with Cymbals	699.99	2018-07-30 12:46:40
Rodriguez Caballero 11	415.00	2018-07-30 14:12:41
Tama 5-Piece Drum Set with Cymbals	799.99	2018-07-30 13:14:15
Washburn D10S	299.00	2018-07-30 13:58:35
Yamaha FG700S	489.99	2018-06-01 11:12:59

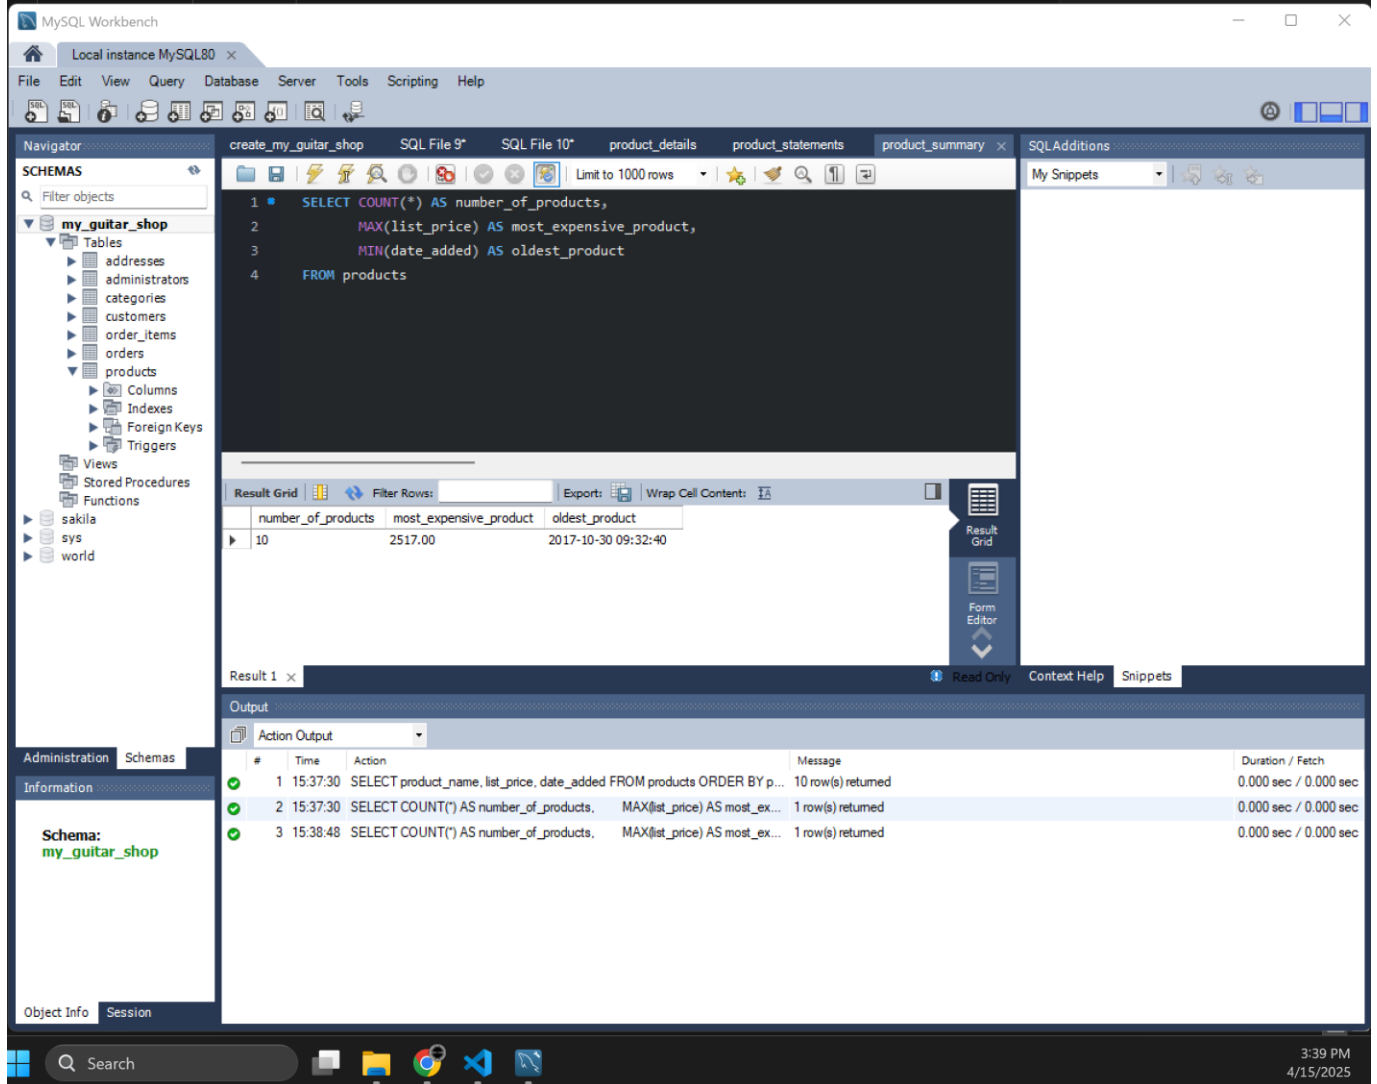

The bottom panel shows the 'Action Output' with the following log entries:

#	Time	Action	Message	Duration / Fetch
1	15:34:48	SELECT COUNT(*) AS number_of_products FROM products LIMIT 0, 1000	1 row(s) returned	0.000 sec / 0.000 sec
2	15:35:46	SELECT product_name, list_price, date_added FROM products ORDER BY p...	10 row(s) returned	0.000 sec / 0.000 sec

Note: The figure illustrates the MySQL Workbench result after performing step 9: Product details.

Please see the next page.

Figure 6
Assignment Step 10: Product Summary

Note: The figure illustrates the MySQL Workbench result after performing step 10: Product Summary.

Please see the next page.

Figure 7
Assignment Step 11: Product Statement

The screenshot displays the MySQL Workbench interface. The left sidebar shows the 'my_guitar_shop' schema with various tables. The main editor window shows the following SQL queries:

```

1 SELECT product_name, list_price, date_added
2 FROM products
3 ORDER BY product_name;
4
5 SELECT COUNT(*) AS number_of_products,
6        MAX(list_price) AS most_expensive_product,
7        MIN(date_added) AS oldest_product
8 FROM products;

```

The 'Result Grid' shows the output of the second query:

number_of_products	most_expensive_product	oldest_product
10	2517.00	2017-10-30 09:32:40

The 'Output' pane shows the execution log:

#	Time	Action	Message	Duration / Fetch
1	15:37:30	SELECT product_name, list_price, date_added FROM products ORDER BY p...	10 row(s) returned	0.000 sec / 0.000 sec
2	15:37:30	SELECT COUNT(*) AS number_of_products, MAX(list_price) AS most_ex...	1 row(s) returned	0.000 sec / 0.000 sec

Note: The figure illustrates the MySQL Workbench result after performing step 11: Product Statement.
