=====
CSC515 - Portfolio Milestone Module 1
Option #2: Face Detection and Privacy
=====
This program loads org_images/brain_image.jpg, displays it,
and saves mod_images/brain_image.png.

OpenCV decodes the JPG into a 3D NumPy array in RAM with shape
(height, width, 3). Each pixel stores three color values in BGR order:
image[row, column] = [BLUE, GREEN, RED]
[0] = blue, [1] = green, [2] = red
The values are unsigned 8-bit integers (uint8), ranging from 0 to 255.

Example:
image = [
    [[255, 0, 0], [0, 255, 0]], # Row 0: blue pixel, green pixel
    [[0, 0, 255], [255, 255, 255]] # Row 1: red pixel, white pixel
]
print(image[0][0][0]) # Blue value -> 255
print(image[0][0][1]) # Green value -> 0
print(image[0][0][2]) # Red value -> 0
print(image[0][0]) # First pixel -> [255, 0, 0] (blue)
print(image[0]) # First row -> [[255, 0, 0], [0, 255, 0]]
print(image) # Full 2x2x3 array:
# [[[255, 0, 0], [0, 255, 0]], [[0, 0, 255], [255, 255, 255]]]

=====

Loading image...
Loaded: /Volumes/P-SSD/Omegapy/CSU-projects/CSC515-CTAs/Portfolio-Milestone-Module-1-Option-2/org_images/brain_image.jpg

Displaying image...
Click on the image window if needed.
Then press any key to save the image into PNG format and exit the program.

Saving copy...
Saved copy: /Volumes/P-SSD/Omegapy/CSU-projects/CSC515-CTAs/Portfolio-Milestone-Module-1-Option-2/mod_images/brain_image.png
Thank you for using this program!
